

Real-Time Food Safety Assurance (e-book)

365 Days of Trust — From Periodic Compliance to Continuous Learning

Modern food safety does not need more audits.
It needs better system intelligence.

This book reveals why certification-driven assurance struggles to keep pace with today's food systems — and how real-time learning, structured knowledge, and intelligent infrastructure restore control. Moving beyond compliance without abandoning it, the author offers a system-level perspective on resilience, assurance, and governance.

For food safety professionals, regulators, and leaders who sense that the system must evolve — not because it is broken, but because the world has changed.
